

Clean Burner Systems Case Study

Ideal Boilers

As a company over 100 years old, Ideal Boilers has a history of innovation, evolution and industry. Today the company

remains at the forefront of the domestic and commercial heating markets, still leading the industry in setting new standards and expanding technological boundaries.

Ideal Boilers required a supplier for central heating boiler burner assemblies that would be a close fit with the values and technological requirements of such an

established company.

Introduced by a third party supplier, Ideal Boilers began their working relationship with Clean Burner Systems (CBS) in 2003. Initially, CBS was a sub-contractor to the third-party supplier, but developed a trusted relationship with Ideal Boilers which led to becoming a direct supplier in June 2007.

Clean Burner Systems

Purchasing Manager Stephen Smith said “we have never had a quality issue with CBS-manufactured products. We are very pleased with the working relationship, which includes regular face to face meetings as well as factory visits. The relationship has always been positive and CBS have proven that they can communicate well and react quickly to the demands of a rapidly changing market. We wouldn’t hesitate to recommend CBS as a reliable supplier of quality burners.”
